

JAVASCRIPT TIPS

JavaScript

QUICK TIPS

Filter unique values

```
const array = [1, 1, 2, 3, 6, 6, 3, 1]
const uniqueArray = [...new Set(array)];

// Result: [1, 2, 3, 6]
```

Convert to boolean

```
const isTrue = !0;  
const alsoFalse = !!0;  
  
// Result: true  
// typeof isTrue: "boolean"
```

Convert to string

```
const val = 5 + "";  
  
// Result: "5"  
// typeof val: "string"
```

Convert to int

```
let int = "15";  
int = +int;  
  
// Result: 15  
// typeof int: "number"
```

Convert float to int

```
const int = 19.8 | 0;  
  
// Result: 19  
// typeof int: "number"
```

Remove last digits

```
const int = 1553 / 10 | 0;;
```

```
// Result: 155
```

```
// typeof int: "number"
```

Truncate an array

```
let array = [0, 1, 2, 3, 4, 5];  
array.length = 3;
```

```
// Result: [0, 1, 2]
```

Last item in array

```
let array = [0, 1, 2, 3];  
array.slice(-1);
```

```
// Result: [3]
```
